ABSTRACT

[00109]   A computer system, method, and apparatus for editing an interactive image video tour. The system may include a computer including an image editor for providing a visual program interface for editing an interactive image video tour; a database in communication with the computer containing data associated with a plurality of images comprising a portion of the interactive image video tour; and a viewer in communication with the computer for displaying the plurality of images. The method may include selecting a data file that includes image data and displaying an image associated therewith on a computer, the data file being stored in an image database containing a plurality of images for creating an interactive image video tour; and modifying one aspect of the image data contained in the selected data file. The apparatus may include a computer-readable medium containing instructions for controlling a computer system to perform a method for editing an interactive image video tour.
